

BOAT GATES

Secure Passage

Worthington Boat Gates are designed for functionality, durability and ease of use. This is especially challenging considering the many challenges of designing a secure, robust floating gate that will operate in high wind, continuous waves and other tough environmental conditions. We offer standard gate designs for a single shallow-draft pleasure boat to customized gates for work-barges, heavy seas, high-wind and other conditions.

Standard gates are designed to be opened/closed with either a one or two-man boat crew and feature heavy duty steel framing, robust buoyancy supports, marine lights, signage and locks.
