

Line of Demarcation

TUFFBOOM

TUFFBOOM LOD is used to defining a maritime security zone by providing a continuous highly visible physical barrier in the water. The TUFFBOOM Line of Demarcation provides first responders the ability to easily and quickly patrol a controlled area, determine intent and respond adequately.

TUFFBOOM are installed worldwide at Ports, Dams, Powerplants and around other critical waterfront assets. The low cost per foot combined with the ease of installation and low maintenance requirements make these barriers ideal for low level security requirements.

Worthington Products, Inc. offers a full line of waterway security barriers starting with our line of demarcation floating barriers and culminating with the TUFFCAT series of vessel exclusion barriers.

Features (At-A-Glance)

1. Highly visible physical barrier.
2. Foam filled so units cannot sink – even if punctured.
3. Heavy internal high load bearing steel channel provides strength and ballast.
4. Deployment in multiple sections
5. Low cost per foot
6. Towable using standard dockyard assets with minimal horsepower.
7. Easily transportable
8. Easy small footprint for storage when not in use.
9. Low maintenance requirements.
10. Can be upgraded into a small-craft barrier.
