

BOATBUSTER-20

Customized Floating Barriers

BoatBuster-20 is not a single barrier but rather a family of customized floating barriers designed around the highly buoyant BoatBuster floats. BoatBuster-20 units typically are designed in 20-foot (6.1m) lengths. BoatBuster-20 designs have included:

- Fish Guidance Screens. Each unit measures 20-ft long and includes a solid 10-foot (3.05m) deep underwater skirt.
- Walking Barriers/Floating Skimmer Walls. Units typically measure 20-foot long by 2.5m wide and feature a floating walking platform with optional submerged debris screens for debris and ice control.
- Heavy-Duty Debris & Ice Booms: Units measure 20-foot long and include submerged debris screens, optional above water screens, and rear stabilizer floats to prevent screens from tilting.

The flexibility of BoatBuster-20 allows Worthington to fabricate units to meet customer and project specific needs. Worthington Products, Inc. is a recognized world-leader in the design, fabrication and supply of quality waterway barriers. The BoatBuster-20 is an example of how Worthington combines its experience, common sense and expertise to offer barrier solutions that require a unique, non-standard approach.

BOATBUSTER-20

Customized Floating Barriers

Features (At-A-Glance)

- Heavy-wall impact resistant polyethylene floats with max. UV resistance.
- Individual float units each provides 1,700 lbs (771 kgs) positive buoyancy via an unsinkable solid core of non-water absorbing foam fill.
- Engineered heavy-duty tubular steel frame designed for site specific conditions.
- Half-shell float design allows easy replacement of damaged float units without having to take the boom line out of service or replace a complete unit.
- Designed for continuous motion and heavy loads.
- Custom designs to satisfy site specific operating conditions.
- All connection hardware designed to be interchangeable and easily replaceable.
