

BOATBUSTER

Marine Safety Boat Barriers / Line of Demarcation

BoatBuster is an engineered, barrel style waterway barrier used primarily for marine safety and low to mid-level security. The unique half-shell design of BoatBuster permits custom site-specific configurations. Securely nestled between each half-shell unit is a heavy-duty internal steel axle. This axle comes in multiple design variations to accommodate a range of load scenarios and movement actions.

Each foam-filled unit is impact-resistant, unsinkable, highly visible and highly buoyant allowing the BoatBuster units to be used in a variety of environments.

BoatBuster barriers are suitable for large bodies of water where high visibility is required, open ocean or high wave areas and high flow tailrace applications. The low draft and rounded profile allows for minimal debris retention making the BoatBuster ideal for low-head overflow type dams.

BOATBUSTER

Dam Safety Boat Barriers / Line of Demarcation

Features (At-A-Glance)

- Heavy-wall impact resistant polyethylene with max. UV resistance.
- Unsinkable solid core of non-water absorbing foam fill.
- Engineered Internal Steel axles
 - 4" HSS steel tubing, end caps with double end plate for pin connection to chain or cable.
 - 4" HSS steel tubing, end caps with single end plate for connection to open spelter cable.
 - Galvanized steel tubing, with end caps for continuous cable through floats.
 - Light duty swivel-eyes on steel rod.
- Inter-boom Connection hardware in cable or chain.
- Half-shell design allows easy replacement of damaged float units without having to take the boom line out of service or replace a complete unit.
- Designed for continuous motion and heavy loads
- Mold-in Graphics™ with standard or customized warnings.
- Available in International Orange, Safety Yellow, White, Red or with customized colors.
- Exceptional Visibility, high buoyancy for maximum freeboard visibility
- Weight: Approximately 225 lbs (102 kgs) per unit with standard axle
- Diameter: 36 in (91.4 cm), Length: 48 in (122 cm)
- Buoyancy: Approximately 1,800 lbs (817 kgs)
- Draft: 5" (12.7 cm)
